YOUR UMBRELLA

YOUR STORY

Big corporation or small company: Every one of your customers has a message to convey. The FARE®-FACTBOOK makes it easy for you to find the right umbrella to match the individual message. Or you can develop a unique umbrella idea and we at FARE will assist you in its realisation. Our intention is to let the different models or series tell their own stories, through form, material and details, for example. Further possibilities are added by printing or finishing. This results in almost unlimited ways to express yourself – always new and surprisingly different.

Why you always impress with FARE® umbrellas

- **Top choice** – with many creative innovations and exclusive highlights
- **First-class FARE® quality** – thanks to decades of experience, the use of high-quality materials and perfect craftsmanship
- **Expressive** – with varied options for finishing and/or promotional labelling

Our tip for getting sales talks off to a good start:

Simply let your customers leaf through the compact FARE®-STYLEBOOK!

Your FARE Team wishes you lots of success!

Simply convincing

We believe that an umbrella has to satisfy the demands on functionality, safety and quality to be able to be effective as a long-lasting promotional item. Let yourself be convinced by the solid arguments in favour of a quality umbrella from FARE.

A trustworthy argument:

Many FARE® products are carefully tested.

TÜV Rheinland Products GmbH subjects selected FARE® umbrella models to strict quality testing. The criteria are:

- User-friendliness
- Shatterproof frame
- Flexibility of rib construction
- Windproofness

After being awarded the TÜV certificate, the production of these umbrellas is subject to an annual inspection of the production facilities by TÜV which therefore guarantees a consistently high product quality.

Learn more about our TÜV product certificates at www.certipedia.com/companies/2534.

Seal example

LABTECH Prüfungsgesellschaft mbH carries out a complete usability test for certain models. For this purpose, professional use is simulated in order to check and ensure the functionality. In addition, special attention is paid to the presence of possible weak points known to the market and the constituent parts are tested for chemical safety. The seal of approval guarantees the consumer a first-class product that stands out from the crowd. Learn more about the Labtech usability tests at www.labtech-gmbh.de/en/usability.html.

Seal example

A windproof argument:

FARE® umbrellas are strong.

Even our less expensive models excel in their high standards of quality and special windproof features for better wind resistance. The majority of FARE® models are equipped with a reliable windproof system. The highly flexible frame for these models turns over when hit by stronger gusts of wind before the ribs break or the cover is torn from its fastening.

A clean argument:

FARE® products are tested for harmful substances.

Labtech and other renowned and accredited testing institutes test our products according to REACH (Registration, Evaluation, Authorisation and Restriction of Chemicals). Alongside conformity with REACH, the relevant legal directives for harmful substances are considered and implemented for our products.

A fair argument:

FARE® products are produced under humane conditions.

Member of amfori, the leading global business association for open and sustainable trade.
We participate in amfori BSCI. For more information visit www.amfori.org

Discover more on this subject on page 11.

A watertight argument:

Many FARE® umbrellas are equipped with a high-quality finish.

An even better pearl-off effect or dirt-repellent properties are achieved with complex refinements, depending on the model:

- **Teflon™ fabric protector** is a coating that is water and dirt repellent.
- **Nanotechnology** gives the umbrella cover a minutely rough structure which prevents dirt and water from sticking to the fabric and they simply pearl right off – this is the so-called lotus effect. This coating is absolutely sealed and promotes a particularly long-lasting product life.

An award-winning argument:

FARE® umbrellas have won several renowned awards.

Red Dot Design Award

- A FARE® product has already been awarded the Red Dot Award: Product Design twelve times by the top-class jury of 40 experts – most recently in 2020 for the **oversize mini umbrella FARE®-AOC Colorline (art. 5644)**.

Promotional Gift Award

- The **AC midsize umbrella FARE®-Sound (art. 7799)** was selected winner of the 2020 Promotional Gift Award in the premium product category.

PSI Sustainability Award

- In 2019, the **AC midsize bamboo umbrella ÖkoBrella (art. 7379)** took 3rd place in the "Sustainable Product" category, which the **AOC mini umbrella ÖkoBrella (art. 5429)** had already won in 2017.

A protective cover – for people and the environment

Everybody talks about sustainability and yet for many this is only an abstract concept. Nevertheless, this principle, which originated in forest management, is as simple as it is sensible: Anyone who only cuts down as many trees as can regrow will ensure consistent continuation of the entire forest – and with this – a good, long-term basis of life for future generations.

Idea

Strategy

Action

Product

At FARE we understand sustainability as a combination of social, economic and ecological fields of activity for our company, which are integrated into our core business. We want to strengthen our customer relations and tie our employees to our establishment in the long-term.

♥ Social

The amfori Business Social Compliance Initiative (amfori BSCI) is a code of conduct based on the international working standards of the ILO (International Labour Organization), which supports globally active companies in building up ethical supply chains and monitors social standards worldwide as well as optimising them continuously.

FARE is a member of amfori BSCI. Our production sites for the manufacture of umbrellas have been audited according to amfori BSCI requirements and all have a valid audit result.

All amfori BSCI participants agree to the Code of Conduct (CoC) and undertake to comply with it. The amfori BSCI Code of Conduct comprises of the following principles as just some examples:

- Appropriate remuneration
- No discrimination
- Safety at work
- Reasonable working hours
- No forced labour
- No child labour

Sustainability and social responsibility does not begin in your own company, or with your own products or employees. We therefore also support many initiatives and associations, which stand up for underprivileged people through their projects.

♥ Economy

Our long-term supplier and business relations contributed to the creation of modern manufacturing sites, where our products are made today. This ensures that our suppliers are reliable and sustainable partners.

♥ Ecology

At FARE we ensure environmentally-friendly working processes through measures such as CO₂-neutral parcel dispatch, bundling production orders and avoiding single item consignments as well as reducing paper by utilising digital documents and much more.

Member of amfori, the leading global business association for open and sustainable trade.
We participate in amfori BSCI. For more information visit www.amfori.org

Responsibility

Future

The FARE® ÖkoBrella family continues to grow

Since FARE launched the first bamboo regular umbrella on the market in 2011, the ÖkoBrella family has grown steadily – from the **manual opener mini umbrella (art. 5095)** to the award-winning **AOC mini umbrella (art. 5429)** and from the **ÖkoBrella Shopping mini umbrella (art. 9159)** to the inexpensive **AC regular umbrella (art. 1122)** and the award-winning **AC midsize bamboo umbrella (art. 7379)**.

The ÖkoBrella products are perfectly suited for sustainable communication in all industries and for every budget. This also applies to the two new introductory models with wooden handle, which complement the Ökobrella family perfectly: The attractively priced **AC regular umbrella (art. 1134)** and the **manual opener mini umbrella (art. 5029)**.

art. 1134

art. 7379

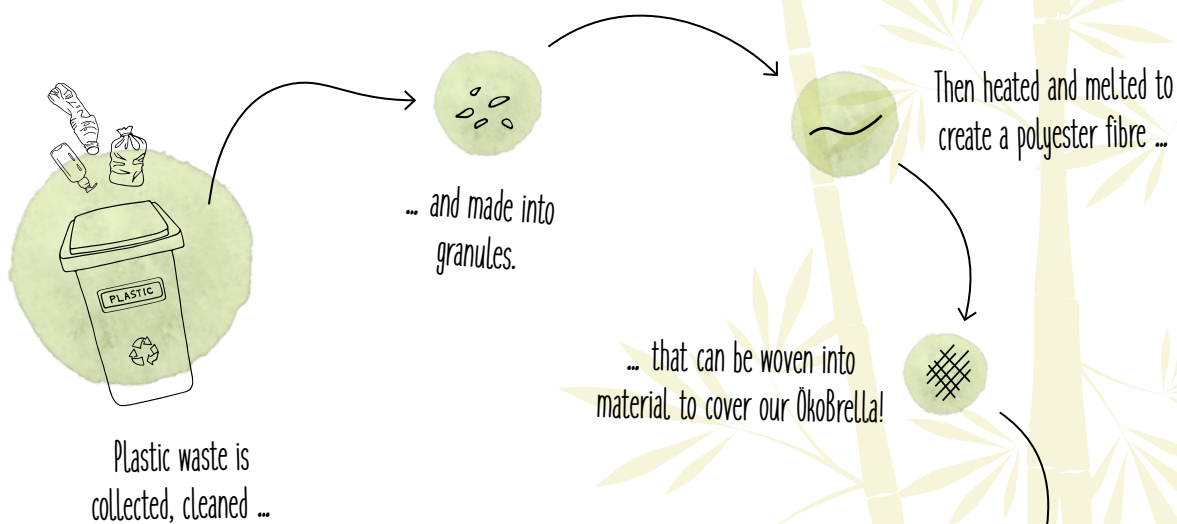

art. 9159

art. 5029

art. 5429

A new life for used plastic

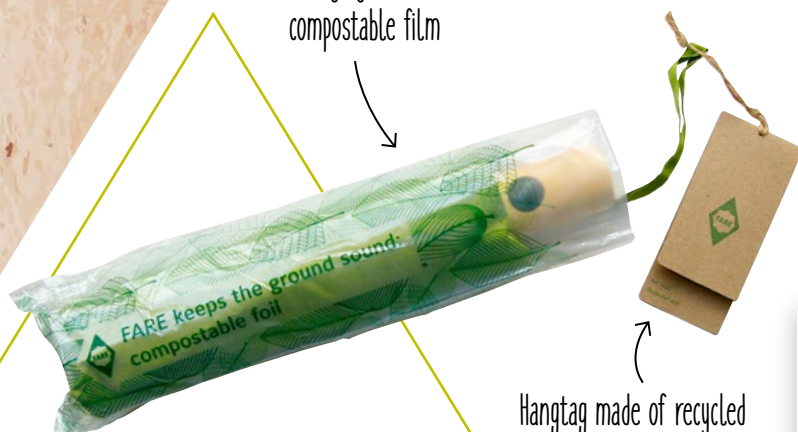

When it comes to sustainability, you probably don't think of plastic first. This material can also be used in an ecologically sound manner. Our ÖkoBrella umbrellas are the best example: The yarn for their STANDARD 100 by OEKO-TEX® certified covers is made from recycled plastics. For this purpose, used plastics, so-called post-consumer materials from households, institutional facilities and industrial plants, are processed in a few steps.

Each ÖkoBrella model is delivered in packaging made of compostable film, provided with a hang tag made of recycled paper and jute cord.

... provides a sustainable material for the handle.

waterSAVE® – Every drop counts

Progressive thinking is good – but only progressive action makes the difference. As part of our sustainability strategy, we not only rethink existing production processes, but also look at new, progressive strategies.

For our waterSAVE® cover material, we use a revolutionary dyeing process that drastically reduces the consumption of valuable raw materials as well as energy consumption and environmental pollution with harmful substances.

Umbrellas with the waterSAVE® cover material can be recognised by the special hangtag. We currently use it for the popular STYLE series, the Colorline umbrellas and the FARE®-Steel.

» Reducing energy consumption by up to

70%

Due to waterSAVE® cover material: Total water saved per umbrella is almost 6 l*

* This is calculated based on water savings of 2 million litres for processing around 300,000 m² of fabric, from which around 350,000 umbrellas can be made.

» Reducing sludge production by

98%

» Reducing CO₂ emissions by more than

60%

To help
mate

Excitingly designed

An umbrella offers a huge variety of refinement possibilities. On the following four pages we show you the different printing methods and their areas of application.

Screen printing

The technique of choice and a proven track record. Up to eight fresh colours may be used for logos, slogans, funny texts or images. The best possible quality and a long lifespan are always at the forefront.

www.efr.de

Dual printing

In order to ensure strong brightness and colours true to the original when using coloured fabric, either dual printing is required or a white undercoat is applied underneath the colour. The opacity of the applied colour is then increased considerably.

Printing colour, white: This requires a dual printing process that is calculated like two-colour printing. Preliminary costs for film, set up and screen costs are only charged once per logo.

Coloured printing: In this case, we work with a white undercoat. It is slightly smaller than the coloured motif to ensure that no white is visible. Costs are incurred for the additional print colour and the corresponding pre-printing costs.

Pricing tip: A colour print on white umbrellas is cheaper, because a white undercoat is not required. The white undercoat is also not needed on all covers in the colours silver, gold and black because they have good coverage even without the white undercoat.

White single print

White dual print

Coloured screen print without white undercoat

Coloured screen print with white undercoat

Colormagic®

An exceptional way to turn dreary grey, rainy days into a happy event is with Colormagic® printing. As soon as the surface gets wet, the white Colormagic® print becomes transparent and the underlying colour becomes visible.

Screen printing without Colormagic® overprint

Screen printing with Colormagic® overprint when dry

Screen printing with Colormagic® overprint when wet

Transfer printing

This means that photo-realistic motifs or motifs with very fine screens and gradations can be perfectly implemented with transfer printing.

With this technique, the motif is printed onto a carrier film first and transferred onto the cover by means of heat. Neon or metallic colours can be used here on request.

Laser stickers

They consist of two layers (wood or plastic), the upper layer of which is removed by the laser so that the motif is represented by the lower layer of a different colour. Simple, flexible and cost-effective. Very good adhesion properties. Also ideal for individual personalisation.

Laser engraving

Discreet and elegant for exclusive demands. Extremely sharp contours and delicate representation of the tiniest details.

Doming

3D effect in vivid colours for a particularly demanding, photo-realistic result. High-quality finished surface, extremely durable.

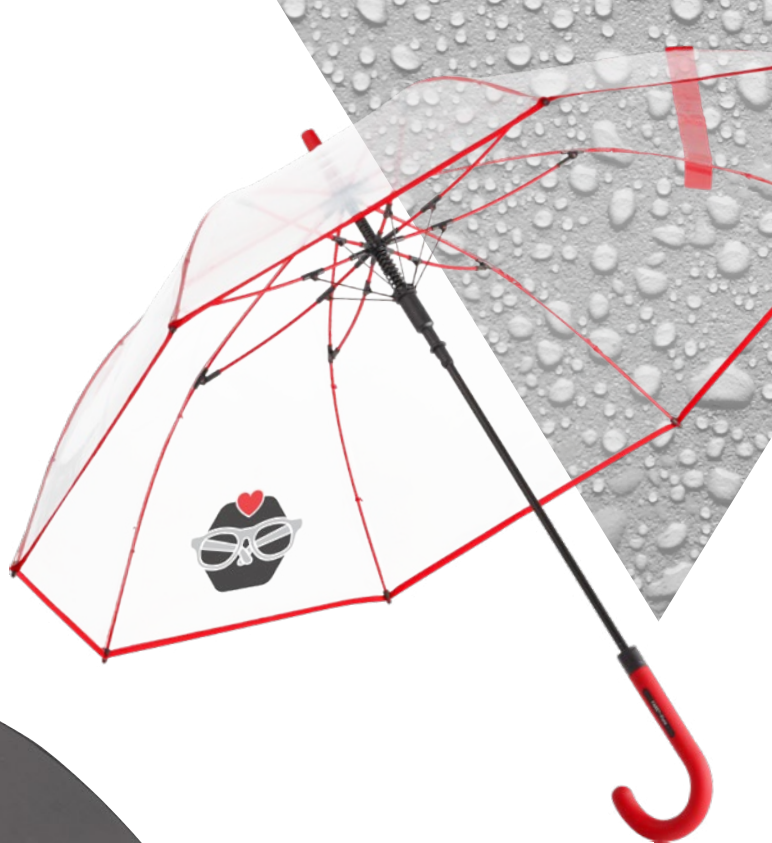

EVA laser engraving

Particularly vivid three-dimensional effect and pleasant to hold. Appropriate umbrellas with soft handles suitable for laser engraving are indicated accordingly.

Finishing of transparent covers/cut-outs

Due to the high-quality polyethylene material, screen printing with up to four colours is possible on our **AC regular umbrella FARE®-Pure (art. 7112)**, the **AC golf umbrella FARE®-Pure (art. 2333)** and the new **AC regular umbrella FARE®-View (art. 1119)**. Please note that the Pure models can be finished with a maximum of two or, on request, four panels. In this case, there must always be an unprinted panel between two printed panels.

Variable filling

With the **mini umbrella FARE®-Fillit (art. 5052)** your options are only limited by your ideas and the size of the handle! Whether you fill it with small products, a voucher, or have a sweet thank you, we'd be delighted to help!

Customised audio logo

Alongside sight, hearing is the sense that takes in the most information. You can take advantage of this opportunity for experience-focused communication with the new **AC midsize umbrella FARE®-Sound (art. 7799)**. It is delivered by default with an excerpt from the classic "Singin' in the Rain", however, a jingle, audio logo or sound icon can be used that plays every time the umbrella is opened.

Individual design in all-over print

A popular finishing variation is motifs that show a photo-realistic look on the entire cover. In order to better respond to this customer request, we now offer the FARE®-Allover Xpress service. Full digital all-over printing of the desired motif can be implemented from an order quantity of just 100 units. Minor matching inaccuracies cannot be avoided, but the overall picture is impressive. Design an individual umbrella easily in four steps:

STEP 1

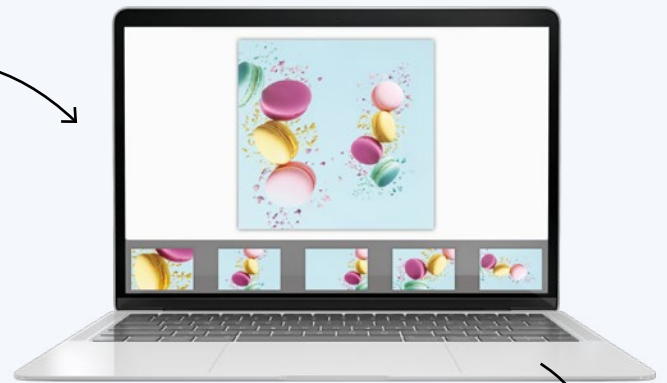

You have five basic models available – just choose your favourite.

All information
on the umbrellas
can be found
from page 146.

STEP 2

Send us your desired motive as a printable file
(min. 90 × 90 cm at 300 dpi).

STEP 3

You receive an e-mail for approval showing
how your motive will be implemented.

The finished umbrella is ready for shipment within 15 to 20 days after approval. You can also decide on your delivery time. Shipment by sea freight takes approx. 50 days and is included in the price. Shipment by air freight takes approx. 14 days and is subject to a surcharge.

Apart from all-over printing, we also offer further finishing options for your umbrella. Please note that, depending on the option selected, the delivery time may be longer.

Domino sticker on the handle
(only possible for art. 75002, 75460 and 71144)

Sleeve in digital printing
(only possible for art. 75002 and 75460)

Original **proof**

Single colour screen printing
on the panel or closing strap

Interior printing
Exterior cover coated in black (light sheen)

STEP 4

Look forward to your customised umbrella!

QUICKVIEW

- Full digital all-over printing of your chosen motive
- From just 100 units
- Ready for shipment within 15 to 20 days after approval
- Artwork approval by e-mail
- Further finishing options

Production-related offset between the segments cannot be excluded.

Individual & versatile

With a little courage and by advance planning, individual customisations can be designed that are completely tailor-made to match the customer's Corporate Identity. It is worth it: Many of these unique designs have now developed into real cult items.

Cover colours and cover fabrics

Do you like one of the umbrellas from the stock range, but the entire cover should have a different colour? Should one or more wedges be coloured? Your ideas can be realised very well with our choice of 18 standard colours (see article 5460). We can also produce the cover fabric in your custom colour.

Wetlook

The umbrellas appear neutral at first glance. A hidden design appears when wet thanks to the special printing technique. Individual wetlook motifs are produced as customisations and are possible on all FARE® models.

All-over printing

Very popular variants for customisations are motifs that extend over several panels or display a photo realistic image over the entire cover. The panels are cut, sewn and fixed to the frame from material that is pre printed edge to edge. Small fit inaccuracies can often not be avoided – but the overall look is impressive.

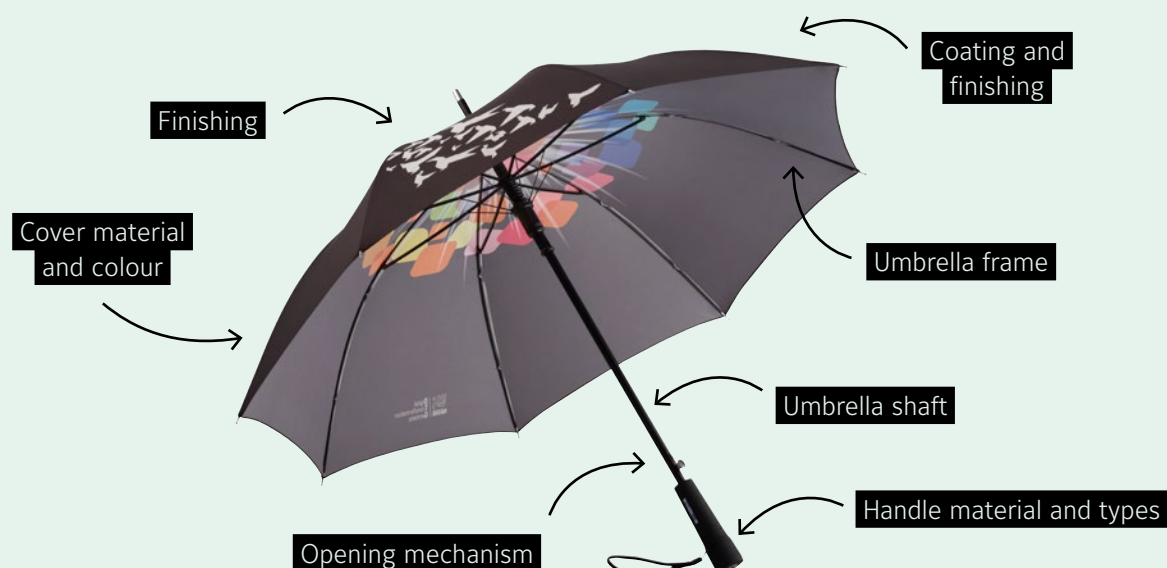

Printed shaft

Printing the umbrella shaft is certainly an interesting and high-quality finishing option. All fibreglass shafts with a diameter of 14 mm can be used for this purpose. Almost all colours and motifs are conceivable. We will gladly check the possibility of implementing your chosen motif!

Unique designs

The special production of a custom-made advertising umbrella that perfectly characterises your company offers practically unlimited creative freedom. Here are a few examples from our "umbrella building kit":

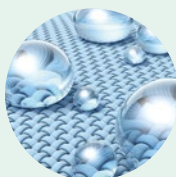

Cover material & colour

The premium polyester pongee is available in 18 standard colours, depending on the model. The cover can also be fully dyed to your specification on request.

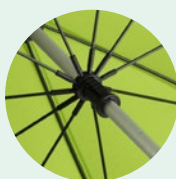

Coating & finishing

Achieve special effects with colour, metallic or reflective coatings. Finishings such as the Teflon™ fabric protector improve the pearl-off effect and protect against dirt.

Opening mechanism

Whether with a manual opener with safety runner, automatic opening or mini umbrella with auto open/close function for convenient opening and closing at the push of a button – you can choose your favourite.

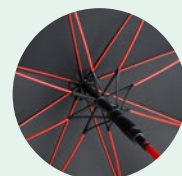

Refinement

Make a statement e.g. with your very own design of woven label, reflecting elements or an individual carrying loop made from plastic.

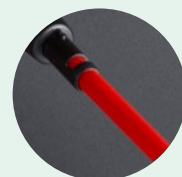

Umbrella frame

By choosing the frame, you not only determine the windproofness and resistance to turning inside out. The combination with coloured fiberglass elements allows surprising effects to be created.

Umbrella shaft

Alongside wood and steel in different variants e.g. galvanised black or with a coloured plastic coating, aluminium or fiberglass are also available to choose.

Handle types & handle material

You determine the shape and material to suit your tastes or select special individual shapes, such as the existing product design like a tool handle.

Sleeve & packaging

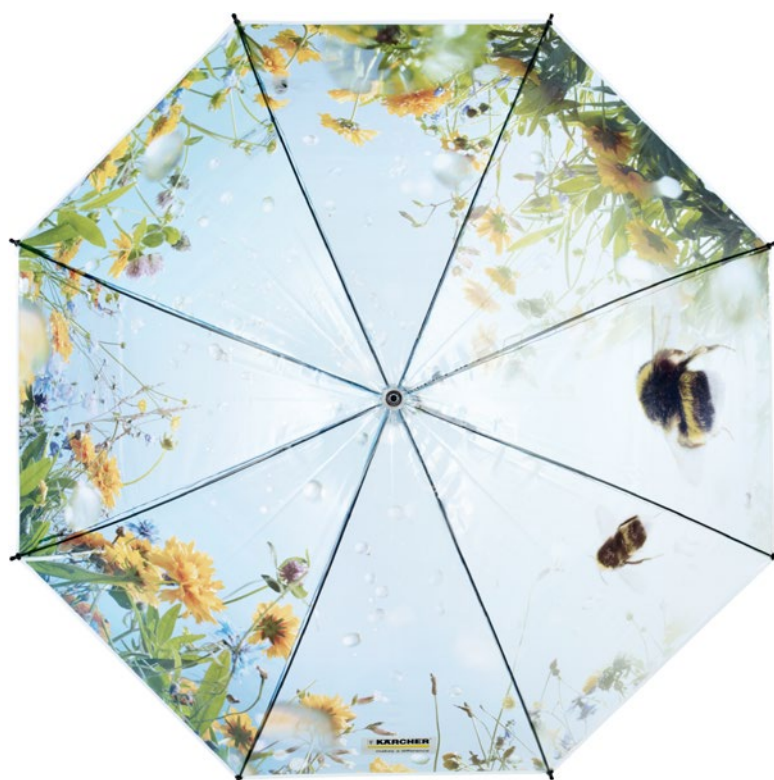

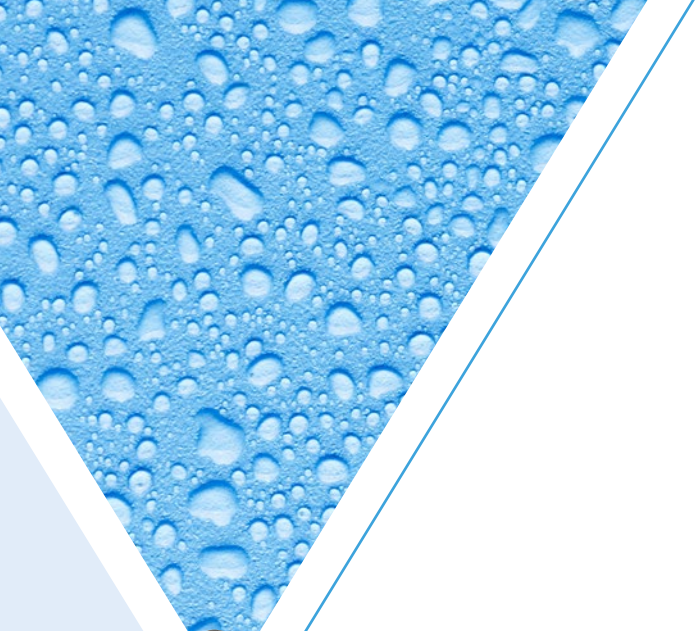

Design the matching sleeve and use the fully printed box and gift packaging for the perfect presentation.

Varied design possibilities

FARE® umbrellas offer plenty of space for any advertising message, from handle to tip. Many renowned companies have already used it and have implemented their ideas with us. And what can we do for you?
